Professional Summary

Senior Mobile Engineer with 7+ years of experience designing and delivering enterprise React Native applications for fintech, banking, media, healthcare, and commerce products serving hundreds of thousands to millions of users.

Proven track record improving application reliability, scalability, and developer productivity by modernizing legacy mobile platforms, designing offline-first architectures, building native iOS and Android modules, and developing cloud-backed mobile solutions with AWS and Firebase.

Strong collaborator who works closely with Product, Design, QA, Security, and Engineering teams to deliver secure, high-performance mobile applications. Passionate about applying AI-driven development, automation, and modern engineering practices to build maintainable software and accelerate delivery without compromising quality.

Skills

- **Mobile Engineering:** React Native, Expo (Managed & Bare), TypeScript, JavaScript, Native iOS (Swift), Native Android (Kotlin/Java), Native Modules, React Native New Architecture (JSI, TurboModules, Fabric)
- **Cloud & Backend:** AWS, Firebase, Google Cloud, GraphQL, REST APIs
- **Performance & Security:** Mobile Performance Optimization, Secure Storage (Keychain/Keystore), Biometrics, SSL Pinning, Authentication Systems, Encryption
- **Delivery & Quality:** CI/CD (GitHub Actions, EAS), Jest, Appium, OTA Updates, codepush, Agile, Code Reviews
- **State Management:** Redux, Zustand, Jotai, Recoil
- **AI & Modern Engineering:** AI-Driven Development (AIDD), LLM Integration, AI Agents, TensorFlow Lite, On-Device AI, Spec-Driven Development (SDD)
- **Leadership:** Technical Leadership, Architecture Ownership, Mentorship, Cross-functional Collaboration

Languages

English (Advanced) • Spanish (Native) • Italian (Advanced) • German (Basic)

Professional Experience

Senior Full Stack Software Engineer - Marketplace

The Coca-Cola Company, USA

Apr 2025 - Present

- Improved application reliability in low-connectivity environments by redesigning the **React Native** platform into an **offline-first architecture**, **SOLID principles**, and resilient synchronization strategies.
- Reduced mobile client complexity and improved API scalability by designing a **Backend-for-Frontend (BFF)** architecture on **AWS**, enabling cleaner service boundaries and faster feature delivery.
- Expanded native capabilities by developing **Swift** and **Java/Kotlin Native Modules** for secure biometrics, encrypted storage, and hardware integrations beyond the JavaScript bridge.
- Increased engineering productivity by defining architecture standards, reusable design patterns, and best practices for **Expo Managed**, **Bare Workflow**, **React Native New Architecture**, and native integrations.
- Improved application security by implementing secure authentication flows using encrypted storage, biometric authentication, and platform-native security APIs.
- Accelerated release quality by mentoring engineers, leading architecture reviews, enforcing code quality standards, and collaborating directly with Product, Design, QA, and Executive stakeholders.
- Optimized mobile performance by improving startup time, reducing unnecessary rendering, and applying production performance profiling techniques across critical application flows.

Senior Software Engineer - Media

NFL+ CTV, USA

Feb 2024 - Mar 2025

- Delivered enterprise-scale streaming experiences serving **millions of users** by architecting a high-performance cross-platform video player using **React Native** and TheoPlayer across Mobile, Web, and Smart TVs.
- Reduced application startup time and memory consumption by optimizing rendering pipelines, asset loading, and native video integrations.

- Improved scalability and maintainability by designing modular architecture supporting live streaming, Video-on-Demand, and future platform expansion.
- Increased release confidence by collaborating with Product, UX, QA, and backend teams throughout Agile delivery cycles and production releases.
- Enhanced application performance by profiling rendering bottlenecks, optimizing navigation, and reducing unnecessary bridge communication between JavaScript and native layers.

Software Engineer - Banking

Itau Bank ITU APP, Chile

Dec 2021 - Feb 2024

- Delivered secure mobile banking capabilities for **100K+ users** by building biometric authentication, encrypted financial workflows, and native security integrations.
- Increased application reliability by maintaining **90%+ automated test coverage** through unit, integration, and end-to-end testing strategies.
- Accelerated software delivery by strengthening CI/CD pipelines, reducing deployment risks, and improving release consistency.
- Expanded native functionality by developing reusable **Swift** and **Java/Kotlin Native Modules** for authentication, secure storage, and banking features.
- Improved security compliance by partnering with backend, infrastructure, and security teams to implement enterprise-grade authentication and data protection practices.

Full Stack Software Engineer - ECommerce

Platanitos APPs, Peru

Mar 2019 - Dec 2021

- Modernized the mobile platform by leading the migration from a legacy web solution to a scalable **React Native + Expo** architecture supporting iOS, Android, and Huawei devices.
- Increased mobile adoption by delivering cross-platform commerce experiences that contributed to an application exceeding **1M downloads**.
- Improved customer experience by implementing end-to-end shopping, payments, product search, push notifications, and authentication using Mercado Pago, Algolia, Firebase, and REST APIs.
- Accelerated engineering delivery by mentoring developers, owning release pipelines, and establishing deployment standards across distributed teams.
- Improved maintainability by introducing reusable architecture patterns, component standardization, and scalable state management.

Software Engineer - Healthcare

Gruppo GPI NGH Healthcare system to European Clinics, Italy - Germany

Mar 2018 - Mar 2019

- Improved clinical workflow efficiency across **3,000+ hospitals and clinics** by developing scalable medical reporting and annotation systems.
- Increased maintainability by designing reusable JavaScript and Java components supporting enterprise healthcare workflows.
- Delivered high-quality reporting capabilities by implementing Jasper Reports and collaborating with cross-functional engineering teams across Europe.

Education

Software Architecture Certification - **University TECSUP**

Computation Bachelor - Tech Institute Trentino Juan Pablo II

Apr. 2025 - Nov. 2025

Mar. 2013 – Dec. 2015
